

Water Magnifying Glass

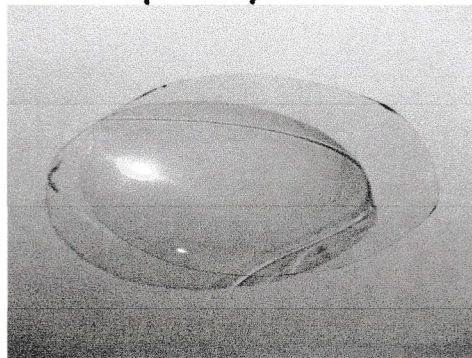

Sometimes the bugs in our gardens are very small and we may need help to see them. A magnifying glass would be very helpful.

How to make a water magnifying glass.

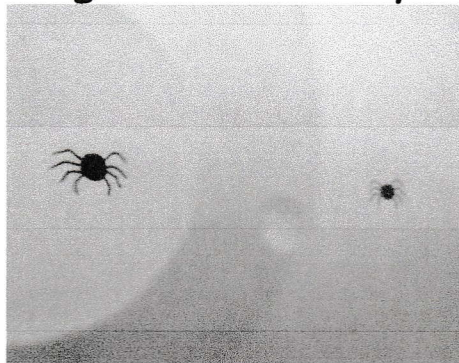

You will need a plastic bottle and some scissors for your grown-up to cut with.

Draw a circle on the top of your bottle. Then cut it out.

Once you have your "lens", add a small amount of water.
Your magnifier is ready to use.

it works!
